

**AUDIO  
CONTROLE**

## DESCRIPTION

4 channel, 4 program digital hearing aid  
28 programmable parameters  
Stand alone software  
Faceplate: Pink, tan or brown  
Shell: Faceplate matching, red or blue color  
Microphone screen

### No charge options

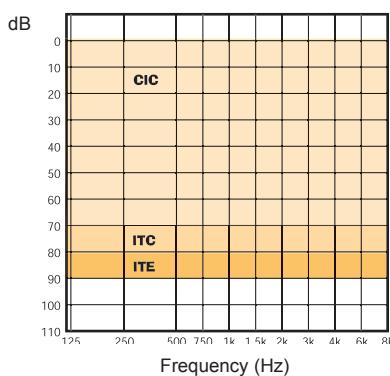

Multiprogram  
External volume control  
Iros  
Adjustable venting selection  
Bell canal  
Hypoallergenic  
Removal notches  
Wax guard  
On/Off switch

### Additional cost options

Programmable telecoil  
"FrontWave™" dual microphone system

## FITTING RANGE

Vivo, our entirely digital hearing aid, combines Canadian technology and adaptability. To program its four channels, four programs and 28 parameters, takes only a few minutes with our Audio Fit software. It is available in different models : ITE, ITC and CIC and includes a warning signal for low battery and a program change indicator. Our dual point compression system allows to position the thresholds and calculate the ratios. The compression time constants can be set for each channel, giving an in depth fitting. Our programmable telecoil ensures a clear understanding of any conversation. Our I-Fit system adjusts the hearing aid according to the audiogram. Our " PASS " Wizard (Patient Application Solutions System) is used to solve minor changes that may occur while programming the hearing aid. Our " SAM " system (Situations Automated Manager) gives environmental adaptability.

Battery life (mA)	1,07	0,96	0,79	-	0,99	0,88	0,77	-
Equivalent input noise (dB)	23	26	27	<32	24	30	24	<35
Attack time (ms)	-	-	-	-	-	-	-	
Release time (ms)	-	-	-	-	-	-	-	

### Added features

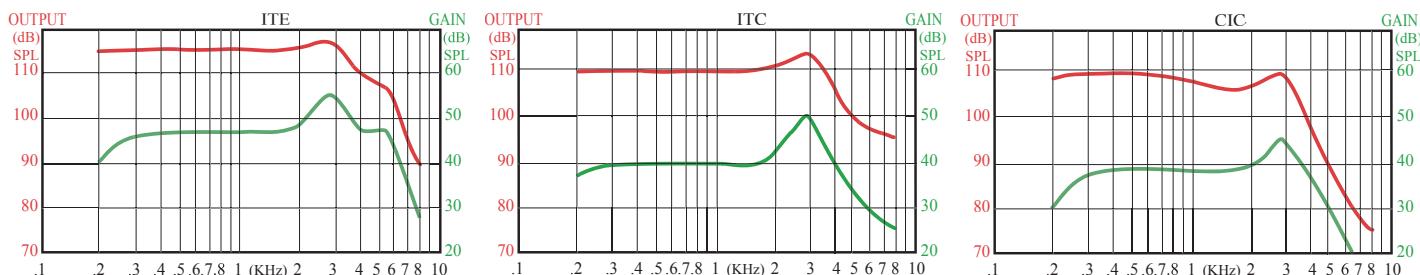

- Low battery indicator
- Program change indicator
- Expansion
- External volume control attenuation (0dB, -8dB -16dB)

### Software features

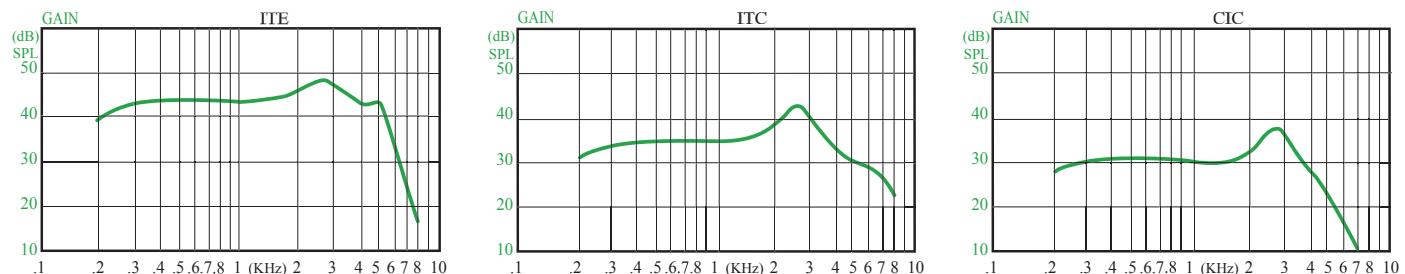

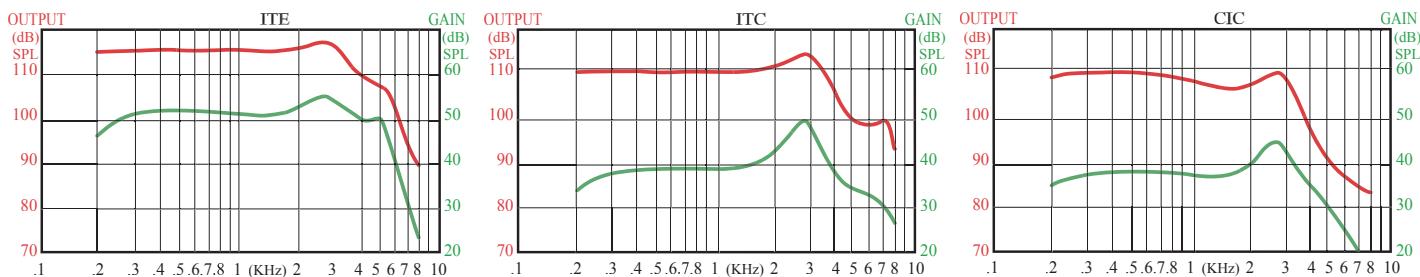

- I-Fit (Ajustement automatique)
- "PASS" Wizard (Patient Application Solutions System)
- FOG (Full On Gain)
- "SAM" System (Situations Automated Manager)

## ANSI S3.22 1987 DATA

## IEC 118-7 1994 DATA

Note: Every hearing aid is built according to the patient audiogram. The given data in this document represent maximal characteristics. They can vary according to the particularities of the order and the shape of the shell. They are also subject to changes without notice..

## 60 dB input curves

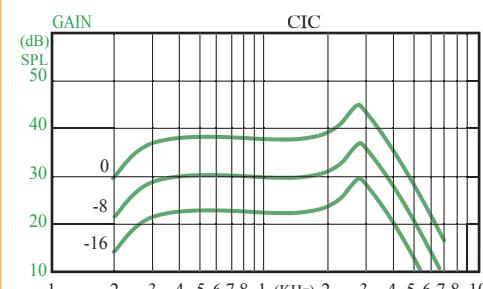

— 116dB output —

— 114dB output —

— 109 dB output —

Note:-8dB and -16dB curves are added features for the external volume control.

## COMPRESSION FEATURES

-Glo and Gup gains operate vertically, moving up or down on their own curve.

-TKlo and TKup threshold changes the knee points along Glo and Gup curves.

-Glo varies lower gain sounds (under Tklo level).

-Gup varies upper gain sounds (above TKup level).

-Tklo and TKup adjust the width of compression zone.

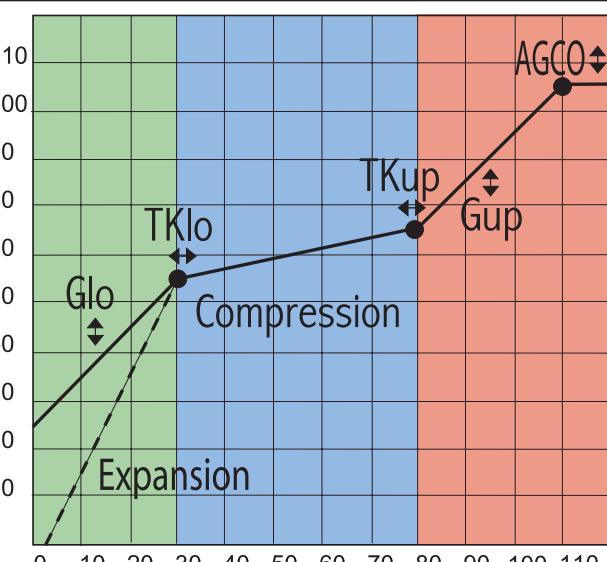

-Because the points move along the Glo curve, horizontal movement of Tklo also produces a vertical movement.

-Because the points move along the Gup curve, horizontal movement of Tkup also produces a vertical movement.

-When Glo=Gup, the aid is in its linear mode, therefore varying Tklo and TKup will produce no changes, since those points move along the same curve.

-Expansion level can be set at predetermined fix points or automatic mode where it follows the lowest Tklo to a maximum of 42dB. Expansion ratio is 1:2.

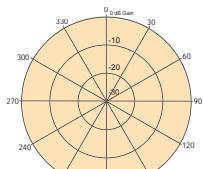

-AGCO allows reduction of the ouptut level up to 16dB.

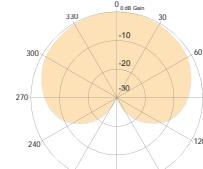

To increase the compression ratio, increase Glo or TKlo.

To decrease the compression ratio, increase Gup or TKup.

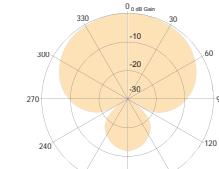

## POLAR PATTERN

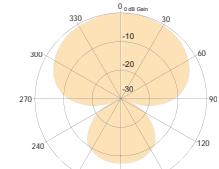

Omnidirectional

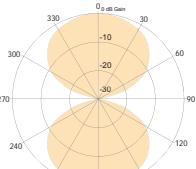

Cardioid

Supercardioid

Hypercardioid

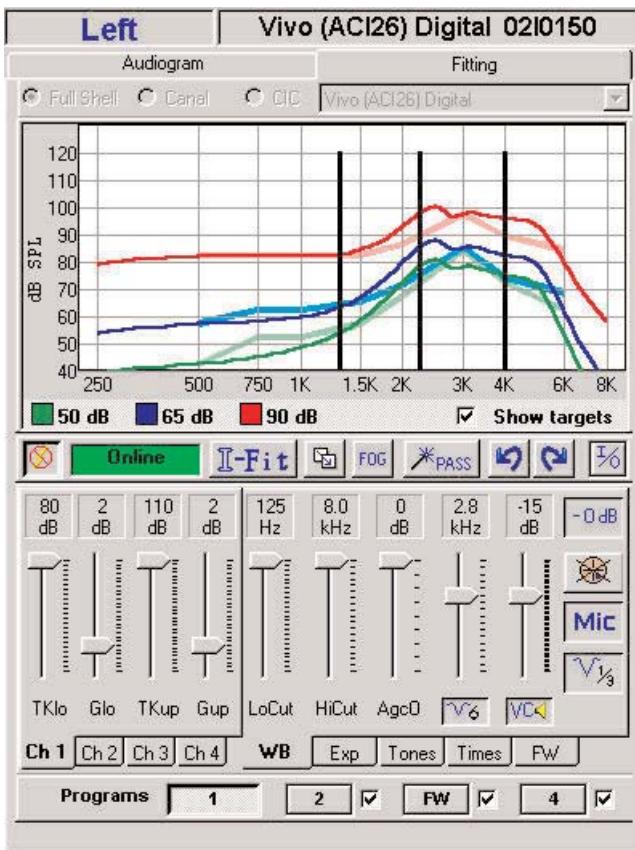

Bidirectional

Vivo has a FrontWave™ directional microphone system. It consists of two separate microphones and an adjustable delayed circuit. This system permits a very wide flexibility when adjusting the directional characteristics. The above diagrams represent certain directional characteristics possible to access from the Audio Fit software.

# AVAILABLE ADJUSTEMENTS

**Vivo (ACI26) Digital 0210150** Model and serial number of the Hearing Aid (detected automatically).

"Connected", establishes the link with the hearing aid.  
 "Disconnected", disables communication and saves the hearing aid settings.

**I-Fit** Adjusts parameters according to the targets.

Allows copying adjustments from one program to another.

Adjusts parameters to obtain maximum power from the hearing aid.

'PASS' Wizard providing solutions and applies them for frequently encountered problems.

Undo the last adjustment.

Redo the last adjustment.

Displays output curves and compression ratio.

-0dB, -8dB, -16dB Matrix choices. Intended to work with the external volume control.

Allows to select and adjust parameters for each channel.

**Mic** **FW** **TC** Program mode.

$\sqrt[1]{1}$ ,  $\sqrt[1]{2}$ ,  $\sqrt[1]{3}$ ,  $\sqrt[1]{4}$ ,  $\sqrt[1]{6}$ ,  $\sqrt[1]{12}$  Sets the notch width for the notch filter.

Filter that cuts low frequencies, varying from 125Hz to 2000Hz.

Filter that cuts high frequencies, varying from 1000Hz to 8000Hz.

Output compression circuit that limits the output from 0 to -16dB.

The notch produces no effect on the response frequency curve.

Introduces a 6dB notch on the response frequency curve.

Introduces a 12dB notch on the response frequency curve.

Introduces a dynamic notch on the response curve.

Activates software volumecontrol.

Mutes hearing aid.

Activates, deactivates external volume.

Activates, deactivates the head room expander. (Exp tab)
